

How to participate:

Simply separate your pre-consumer (back of house) food scraps from the other trash!

A hauler service will come and pick up your food scraps each week.

The scraps will be brought to the Urbana Landscape Recycling Center to be made into garden compost.

Benefits:

- Less odor, weight, and volume in your landfill trash (potentially less cost of landfill waste hauling)
- Recognition as an organization that composts!
- Benefits to the environment (less food in our local landfills means less greenhouse gas pollution)
- Benefits to the local community (gardens and landscapers purchase locally-sourced compost from the landscape recycling center)
